

DELTA Additive Manufacturing Series

3D PLATFORM

Big & Tall. Fast & Precise. It's about Time!

With the Delta Series, 3D Platform takes this TALL print format and adds BIG. When a Cartesian format just will not achieve the height you need, we have machine to take your large-format industrial 3D printing to the next level.

The flexibility you need. Height like there's never been.

With the added benefit of lightweight parts, you can now have large-format printing with greater speed and accuracy. But just how large you can go, now only depends on how big and tall of a machine you work with. 3D Platform offers a full line of 3D delta printers to get you the full size print ready for your application.

Specifications

- Fused Filament Fabrication (FFF)
- Heated Bed: 145°C max. temp.
- 2.85mm filament
- 3 Nozzles
- Melt point below 295°C
- Open market materials
- Build speed: 70-175 mm/sec
- Enclosure
 - Filter and/or heater
