PBC Linear to Exhibit 3DP Unlimited Printer at ATX West

Large-format 3D Printer Utilizes PBC Linear's Advanced Mechatronics

Roscoe, IL – February 9, 2015 – 3DP Unlimited, a leading manufacturer in industrial-class large-format 3D printers, has been chosen by PBC Linear as a comprehensive demonstration of the company's linear motion applications at the ATX West Show in Anaheim, February 10-12. For the past 30 years, PBC Linear has been a world-leading developer and manufacturer of advanced mechatronics and linear motion solutions for a broad range of applications.

Exhibiting at the PBC Linear booth will be 3DP Unlimited's flagship printer, the 3DP1000. The 3DP1000 is an open-platform, large-format 3D printer, whose print area of 1000mm x 1000mm x 500mm is 74 times larger than the average desktop 3D printer. The industrial-class quality of the 3DP1000, which retails for roughly one tenth of the price of other 3D printers its size, is enabled by PBC Linear's advanced mechatronics technology and linear motion solutions.

"When we first started building the 3DP1000, we knew we didn't want to make another 'me too' product," said John Good, VP of Sales at 3DP Unlimited. "We knew how saturated the 3D printing market was becoming, and we knew the demand for 3D printers that are high in quality, yet low in cost, would be enormous. That's why we went to PBC Linear. We recognized their expertise in creating robust linear actuators, and saw how their technology could be perfectly applied to build a large 3D printer of the highest structural integrity. We really relied on PBC to help us design everything – the bearings, the drive, the motor, even the controls."

-MORE-

PBC Linear, who announced a joint venture with Moons' Industries, the world's fourth largest stepper motor manufacturer, in November of last year, chose to showcase the 3DP1000 at ATX West as a standout example of the company's expertise in creating complete mechatronics and linear motion solutions.

"We are so proud of the creative ways that we were able to deliver complete, top-to-bottom solutions to 3DP Unlimited's printers," said Robert Schroeder, CEO of PBC Linear. "The 3D printing industry has really been on fire lately, so we jumped at the opportunity to apply the industrial-class technology that we have been perfecting for the past 30 years to create something so fresh and exciting."

Live, on-going demonstrations of the 3DP1000 will take place throughout ATX West, at the PBC Linear exhibit (Booth #4583), in Anaheim, CA, February 10-12.

About 3DP Unlimited

3DP Unlimited is a manufacturer of large format, industrial class 3D printers. Based in Roscoe, Illinois, 3DP Unlimited's world-class engineers utilize their expertise in mechatronics and linear motion to design and construct the highest quality large format 3D printers in the world. www.3dpunlimited.com

About PBC Linear

For over 30 years, PBC Linear, a Pacific Bearing Company, has been a world-leading manufacturer of linear motion and bearing technologies, and a developer of wide range of solutions designed to solve difficult motion applications. www.pbclinear.com
