WORKCENTER 500
Extra-Large Format Additive Manufacturing System

- **Extra-Large Work Area** of 1400 mm x 2800 mm x 700mm (2.7 m³ of print volume)
- **Spool and Pellet Fed Extruders** Allow for throughput rates from 1 kg/hr up to 6.8 kg/hr (15 lb/hr)
- **Fortune 100** Brands Trust 3DP

At 3D Platform, we are committed to making your biggest ideas a reality. As a global leader in manufacturing LARGE FORMAT industrial strength 3D printers, our team is focused on driving advancements in technology to innovate, design and build next-generation equipment for additive manufacturing at an AFFORDABLE price.

THE MOST TRUSTED OPEN MARKET 3D PRINTER
When top industry leaders are looking to stay competitive in a demanding market, 3D Platform is who they call. We are trusted by design needs of the most innovative ideas. Recognized worldwide, our global distribution network supported by Certified Service Providers has helped us deploy more large-format, open market 3D printers than anyone else. That’s Big.

When it comes to maximizing innovation and value for our customers, our Open-Market Advantage gives you the ability to choose from a wide variety of open-market filament / pellets and software that can deliver up to a 90% savings on your investment. The WorkCenter machine is the only extra-large format 3D Printer that gives you the choice of pellet or filament extruders – or both!
WORKCENTER 500
The Most Affordable Extra-Large Format Machine

Breaking Through Barriers of Size, Throughput and Cost
We design products that push the limits of innovation. Our focus on size, speed, flexibility, and durability is meant to help expand your business capabilities.

Why choose 3D Platform? Because your BIGGEST ideas should become reality.

EXTRA-LARGE FORMAT
- Fused Filament Fabrication (FFF) type 3D printer with an extra-large build volume of 1.4 m x 2.8 m x 700 mm
- The only machine on the market in this category to provide the option of pellet or filament extruder(s) – or both!
- Throughput rates from 1.3 kg/hr to more than 6.8 kg/hr!

OPEN MARKET SOLUTION
- Leverage the power and resources of thousands of worldwide organizations to bring your solutions to live more quickly and affordably
- No proprietary solutions. No closed eco-systems that limit additive manufacturing capabilities.

AFFORDABILITY
- Designed from the ground-up
- Capitalize on the cost-effective open-market advantage: an affordable purchase price and lower operating costs lead to a faster ROI.
- Up to 90% savings using open market materials and software.

ROBUST
- Industrial strength design delivers superior performance and reliability.

Scalable Extruder Size
Choose the High-Volume Extruder (HFE) system that fits your application. Options range from 1.3 kg/hr to more than 6.8 kg/hr (15 lb/hr).

### Extruder Choices

#### Pellet Fed 3D Printer Extruder

The WorkCenter is the only extra-large format 3D Printer that offers the choice of a pellet or filament system – or both!

#### HFE 900 3D Printer Extruder

$9,999

The (High Flow Extruder) HFE 900 offers 16x more volumetric throughput compared to the industry baseline, volcano extruder.
- Fastest spool-fed extruders on the market
- 16x the volumetric throughput of 3DP's previous generation of extruders
- Produce maximum output with high reliability
- Uses world’s largest, spool-fed filament: 6 mm

- **Volume / Second:** 273 mm³/s (59.9 in³/hr)
- **Volume / Hour:** 60.0 in³/hr
- **Nozzle Sizes:** 1.2 mm, 1.8 mm, 2.4 mm, 3.6 mm, 4.8 mm

#### HFE 300 3D Printer Extruder

$4,999

The (High Flow Extruder) HFE 300 offers four times the volumetric throughput compared to volcano extruder, and offer customers the flexibility to change extruders depending on their application and purpose.
- Quadruple the volumetric throughput of 3DP’s previous generation of extruders
- Produce maximum output with high reliability
- Uses commercially available 2.85 mm filament

- **Volume / Second:** 70 mm³/s (15.38 in³/hr)
- **Volume / Hour:** 15.4 in³/hr
- **Nozzle Sizes:** 1.2 mm, 1.8 mm, 2.4 mm

---

1. Volumetric output listed is for unfilled PLA. Actual output will depend on many factors, including but not limited to: print geometry, nozzle diameter, material fill percentage, processing temperature, and material density.
